COMPANY OVERVIEW

Grant Harbor is a Florida-based, veteran-led software engineering business in formation. It is being established to help government organizations build, expand, and improve digital systems through feature development, integrations, data work, practical AI functionality, and incremental modernization.

CORE COMPETENCIES

- **Software Feature Development** New functionality for existing applications and digital services.
- **Backend Software Engineering** APIs, business logic, databases, services, and application architecture.
- **Systems & API Integration** Internal, external, and event-driven integrations across platforms.
- **Data Engineering & Pipelines** Reliable movement, transformation, validation, and synchronization of data.
- **Digital Government Services** Citizen and employee portals, forms, workflows, and transactional services.
- **AI Integration** Search, summarization, document processing, retrieval, and workflow automation.
- **Application Modernization** Incremental upgrades to applications, APIs, frameworks, databases, and architecture.

PRINCIPAL'S RELEVANT EXPERIENCE

- **Healthcare platforms** Built Python/Django backend services, APIs, secure workflows, and distributed-system integrations; engineering improvements increased processing throughput by approximately 25%.
- **EV infrastructure** Developed backend APIs and low-latency services supporting a production charging platform serving 50,000+ daily users, with CI/CD, monitoring, and production support.
- **E-commerce systems** Delivered microservice and API enhancements for ordering and fulfillment workflows; backend optimizations reduced API response time by approximately 14%.
- **Data & analytics applications** Built reporting, GraphQL, data-processing, and database functionality; query and caching improvements reduced database load by approximately 30%.

Prior experience reflects the professional work of Grant Harbor's principal and is not presented as corporate past performance of Grant Harbor Group LLC.

DIFFERENTIATORS

- **Responsive communication** Direct access to the people responsible for delivery.
- **Rapid team integration** Designed to become productive inside existing technical environments quickly.
- **Feature-focused delivery** Organized around working software capabilities, not simply technical labor.
- **Engineering-led execution** Technical decisions remain close to implementation.
- **Maintainable software** Solutions are built to remain supportable and extensible after delivery.

BEST-FIT ENGAGEMENTS

- **Application enhancements** Defined feature or workstream delivery inside an existing system.
- **Citizen digital services** Government website, portal, form, and workflow improvements.
- **Backend & integration work** APIs, services, system connections, and data movement.
- **AI-enabled features** Practical AI capabilities embedded into existing applications.
- **Modernization** Targeted technical upgrades tied to useful business functionality.

DELIVERY MODEL

The planned delivery model may embed a senior engineer or supply part of a cross-functional team. Future teams may add project management, UX/design, engineering leadership, front-end, backend, data, or AI roles as scope requires.

COMPANY INFORMATION

Proposed Legal Name: Grant Harbor Group LLC
Formation Status: Florida LLC formation pending
Location: Florida
Planned Primary NAICS: 541511
Planned Secondary NAICS: 541512, 541519
UEI / CAGE: Not yet assigned
SAM.gov: Not yet registered
Certifications: Not currently held; applications planned

BUILD USEFUL GOVERNMENT SOFTWARE. INTEGRATE QUICKLY. COMMUNICATE CLEARLY. SHIP MAINTAINABLE FEATURES.
